

A fighter jet, likely an F-35, is shown in flight against a backdrop of dark, dramatic clouds. The jet is angled upwards and to the right, with its canards and wings clearly visible. The overall tone is high-tech and powerful.

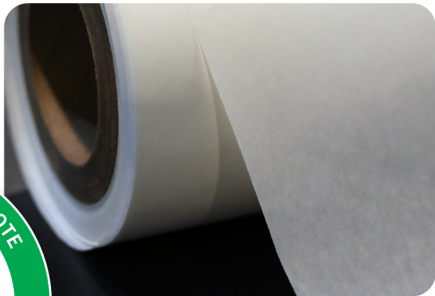

G-FORCE

GLASSINE LINER PRODUCTS

The power to impact profit, performance and planet

Technicote's line of paper-based glassine liner products provides the value, strength and sustainability your clients demand.

The latest innovation from Technicote—G-Force 1.7 mil glassine products—provides numerous benefits over traditional liners. This paper-based technology creates a dense, smooth release liner with exceptional hardness. These qualities result in high-value and high-performance while also making a positive environmental impact.

Features of G-Force Glassine Products

STRENGTH

Our G-Force liner is harder than typical SCK products which allows for more consistent die-cutting and high speed auto-dispensing.

SMOOTHNESS

The exceptional finish of glassine products provides better adhesive formation and a better wet-out when adhesive coating.

YIELD

The density of G-Force products produces a lower weight and thickness allowing for longer rolls with more labels on each roll.

SUSTAINABILITY

Due to longer rolls and a lighter weight, G-Force lowers your carbon footprint due to decreased transportation emissions and less waste during changeover.
